## Ravasol 141-S

### Dispersing Agent

#### Description

Ravasol 141-S is the Sodium salt of Polyacrylic Acid of medium molecular weight.

#### Applications

Ravasol 141-S is used as a versatile and cost-effective dispersing / suspending agent in a wide variety of applications, which include:-

- paint and coating manufacture
- adhesive manufacture
- mining and mineral handling (china clay, metal ores)
- inorganic pigment dispersions
- paper production
- textile processing
- boiler water treatment

#### Properties

Property	Value
Appearance	Colourless to pale yellow
Active Content	Minimum 35 %
pH	6.5 – 8.5

In general, the pH of the final preparation should be circa 8.5 to achieve optimum dispersing efficiency. Addition levels will vary depending upon pigment / filler type. High addition levels may result in reduced performance ie. water resistance.

#### Packaging

- 1000 litre Intermediate Bulk Containers at 1250 kg nett
- Can also be supplied in bulk truck

#### Shelf Life

When stored / un-opened in the original packaging and protected from direct sun light at 5-25°C the shelf life exceeds 6 months. If customer's storage conditions are not aligned to these parameters, then tests should be carried out to determine the shelf life under alternative and specific storage conditions.
